A Project Report On

E-Commerce Website for ApexStriker

Submitted To

Department of Computer Application

Itahari Namuna College

In partial fulfilment of the requirements for the degree of Bachelor's in Computer Application.

Submitted By

Bipin Limbu

Under the Supervision of

Er. Saroj Ojha

Lecturer

Tribhuvan University

Faculty of Humanities and Social Sciences

Itahari Namuna College

Supervisor's Recommendation

I hereby recommend that this project prepared under my supervision by Bipin Limbu entitled "**E-Commerce Website for ApexStriker"** in partial fulfilment of the requirements for the degree of Bachelor's in Computer Application is recommended for the final evaluation.

Er. Saroj Ojha

Project Supervisor

Itahari Namuna College

Itahari-8, Sunsari

Tribhuvan University

Faculty of Humanities and Social Sciences

Itahari Namuna College

Letter of Approval

This is to certify that this project prepared by Bipin Limbu entitled "E-Commerce Website for ApexStriker" in partial fulfilment of the requirements for the degree of Bachelor's in Computer Application has been evaluated. In our opinion it is satisfactory in the scope and quality as a project for the required degree.

Er. Saroj Ojha	Nabin Shrestha
Supervisor	HOD/Coordinator
Internal Examiner	External Examiner
Itahari Namuna College	Tribhuvan University

ACKNOWLEDGEMENT

The success and final outcomes of this project require a lot of guidance and assistance from many people and are very fortunate to have this all along the completion of this project. We would like to express our gratitude and appreciation to all those who gave us the possibility to complete this project. We are very glad to express our deepest sense of gratitude and sincere thanks to our supervisor Er. Saroj Ojha whose contribution in simulating suggestions and encouragement helped us in completing our project. All useful suggestions for this whole work and co-operative behaviour are sincerely acknowledged.

Last but not the least, many thanks go to our teachers, friends, guardians who directly or indirectly helped us in achieving the goal. We would like to appreciate all the guidance and support, which helped in completion of this project. Special thanks to their comment and advice.

CHAPTER 1: INTRODUCTION

Introduction to Ecommerce

E-commerce, short for electronic commerce, refers to the buying and selling of goods or services over the internet. It involves the use of websites and online platforms to conduct transactions, as well as the use of electronic payment methods such as credit cards and digital wallets. E-Commerce has grown rapidly in recent years, driven by the increasing availability of high-speed internet and the widespread use of smartphones and other mobile devices. It allows customers to shop online from anywhere and at any time, making it convenient and accessible. Online businesses can also reach a global audience and expand their customer base.

There are several different types of ecommerce, including:

1. Business-to-Consumer (B2C): This type of e-commerce involves businesses selling products or services directly to consumers. Examples include online retailers such as Amazon and clothing websites such as ASOS.
2. Consumer-to-Consumer (C2C): This type of e-commerce involves individuals selling products or services to other individuals. Examples include online marketplaces such as eBay and Etsy.
3. Business-to-Business (B2B): This type of e-commerce involves businesses selling products or services to other businesses. Examples include wholesale distributors such as Alibaba and Thomas Net.
4. Consumer-to-Business (C2B): This type of e-commerce involves consumers selling products or services to businesses. Examples include freelance platforms such as Upwork and Fiverr.

Ecommerce has many advantages for both businesses and consumers. For businesses, it allows for a larger customer base and increased revenue, as well as the ability to reach global audiences. It also allows for automation of many business processes, such as inventory management and customer service. For consumers, it offers convenience and accessibility, as well as the ability to easily compare prices and products.

However, ecommerce also has its challenges. Businesses must navigate the competitive online marketplace and find ways to stand out. They must also ensure that their website is user-friendly and secure to protect customer information. Additionally, ecommerce businesses must comply with legal regulations, such as those related to taxes and consumer

protection.

Overall, ecommerce is a rapidly growing industry that offers many opportunities for businesses and consumers alike. As technology continues to advance, we can expect to see even more innovation and growth in the ecommerce space in the coming years.

Introduction to MIS

Management Information Systems (MIS) is a field of study that focuses on the use of technology to support and improve decision-making, coordination, and operation within organizations. It involves the development, implementation, and management of systems and technologies that provide managers with the information they need to make informed decisions.

The main components of an MIS include:

1. **Hardware:** The physical equipment and devices that make up the system, such as servers, computers, and mobile devices.
2. **Software:** The programs and applications that run on the hardware, such as databases, spreadsheets, and business intelligence tools.
3. **Data:** The information that is stored, processed, and analyzed by the system, such as financial data, customer data, and sales data.
4. **Procedures:** The set of processes and protocols that are used to manage and operate the system, such as data entry, data validation, and data backup.
5. **People:** The users of the system, such as managers, employees, and customers.

An MIS can support a wide range of business functions, including:

1. **Operations management:** The management of day-to-day business activities, such as inventory management, supply chain management, and production planning.
2. **Decision-making:** The use of data and analytics to inform strategic and tactical decision-making. 2
3. **Financial management:** The management of financial resources, such as budgeting, forecasting, and accounting.
4. **Marketing:** The management of marketing activities, such as customer relationship management, market research, and advertising.
5. **Human resources:** The management of human resources activities, such as recruitment, training, and performance management.

MIS is an interdisciplinary field that draws on knowledge from computer science, information technology, management, and other areas. Professionals in this field often have skills in programming, database management, systems analysis, and project management, as well as knowledge of business operations and processes.

The field of MIS is constantly evolving as new technologies and trends emerge. Cloud computing, big data, and artificial intelligence are some of the recent trends that are shaping the future of MIS. Organizations are increasingly using these technologies to gain insights from data, automate processes, and improve customer engagement.

In summary, Management Information Systems (MIS) is a field of study that focuses on the use of technology to support and improve decision-making, coordination, and operation within organizations. It helps the management to take better decisions by providing them with accurate and relevant information, it also helps to automate various business processes and improve overall efficiency of the organization.

Introduction to Store: ApexStriker

In today's digital age, convenience and accessibility are essential for a successful online shopping experience. Our project, **ApexStriker**, is designed to provide a seamless and reliable online shopping platform for football enthusiasts and customers looking for quality football accessories.

Our mission is to provide a comprehensive multi-vendor e-commerce platform where customers can discover and purchase a wide range of football-related products from different vendors in one place. The platform offers products such as footballs, jerseys, boots, gloves, training equipment, and other football accessories, making it convenient for both casual players and professional athletes.

Whether you are a professional football player, a beginner, or a football enthusiast, ApexStriker aims to make the shopping experience smooth, secure, and enjoyable. The platform includes features such as **product and brand filters, customer reviews, vendor reporting, vendor management, administrator control, product management, order management**, and a multi-vendor system that allows different sellers to offer their products.

To make online purchasing convenient for customers in Nepal, ApexStriker also supports **eSewa and Cash on Delivery (COD)** as payment options.

CHAPTER 2: PLANNING

Introduction

The success of a strategy in E-Commerce should be measured by the sales data generated and ultimately the profits made. The most important thing is to have a clear strategy, define goals, and measure progress against those goals.

An online store can be built quickly, but upfront planning ensures that the site attracts enough customers to generate revenue. Proper planning also helps allocate resources efficiently, understand business objectives, and set KPIs to verify that the e-commerce strategy is successful.

The E-Commerce Planning Process

The planning process for our **ApexStriker** project involves several key steps:

1. **Define Your Vision & Goals:**
    - **Target Market:** Identify ideal customers such as football players, football enthusiasts, beginners, and sports lovers looking for quality football products and accessories.
    - **Value Proposition:** Provide a convenient multi-vendor platform where customers can purchase footballs, jerseys, boots, gloves, training equipment, and other football accessories from different vendors.
    - **Goals:** Set SMART goals (Specific, Measurable, Achievable, Relevant, Time-bound) for increasing product sales, attracting customers and vendors, improving customer satisfaction, and growing the platform.
2. **Market Research & Competitor Analysis:**
    - **Market Research:** Analyze the demand for football products and accessories in Nepal and identify customer preferences and current e-commerce trends.
    - **Competitor Analysis:** Study existing e-commerce and sports product platforms such as Daraz and other online sports stores to identify their strengths, weaknesses, and opportunities that ApexStriker can address.
3. **Product Selection & Vendor Management:**

- **Product Range:** Provide a diverse catalog including footballs, football boots, jerseys, goalkeeper gloves, training equipment, bags, socks, and other football accessories.
- **Vendor Management:** Allow multiple vendors to register and sell their products while providing administrators with tools to manage vendors, products, reported vendors, and platform activities.

4. **E-Commerce Platform & Website Development:**
   - **Platform Selection:** Use the **Django framework** with **SQLite database** for developing and managing the e-commerce platform.
   - **Website Design:** Build a user-friendly and responsive website with product categories, brand filters, search functionality, secure login/signup, shopping cart, customer reviews, and vendor-related features.
5. **Marketing & Customer Acquisition Strategy:**
   - **Marketing Channels:** Use social media platforms such as Facebook and Instagram along with SEO and other digital marketing methods to reach football players and enthusiasts.
   - **Customer Acquisition:** Offer discounts, special offers, product bundles, and other promotional activities to attract new customers and encourage repeat purchases.
6. **Logistics & Fulfilment:**
   - **Vendor Fulfilment:** Vendors are responsible for managing their available products and preparing customer orders according to the platform's order process.
   - **Shipping & Returns:** Establish clear shipping and return procedures to ensure customers receive their products safely and can request returns according to the platform's policies.
7. **Payment Processing:**
   - **Payment Methods:** Provide convenient payment options such as **eSewa** and **Cash on Delivery (COD)** to support customers in Nepal.

- **Payment Security:** Ensure that payment-related information and transactions are handled securely through the platform.

8. **Customer Service & Platform Management:**
    - **Customer Support:** Provide support for customer inquiries, product-related issues, orders, returns, and other concerns.
    - **Customer Feedback:** Use customer reviews and feedback to improve product quality and the overall shopping experience.
    - **Reporting System:** Allow customers to report inappropriate or problematic vendors, with administrators able to review and take appropriate action.
9. **Launch & Monitoring:**
    - **Launch:** Perform testing and a soft launch to identify and fix technical or functional issues before full deployment.
    - **Monitoring:** Continuously monitor sales, orders, vendors, customer reviews, reports, and user feedback to improve the platform.

Remember:

The e-commerce planning process is cyclical. As data, customer feedback, and vendor performance are collected, the strategies, product offerings, platform features, and management processes can be refined to achieve long-term success for **ApexStriker**.

CHAPTER 3: NETWORK INFRASTRUCTURE

Introduction

A network infrastructure is a critical component of any e-commerce website, as it provides the foundation for the website's operations and enables the exchange of data between the platform, customers, vendors, and administrators. For our **ApexStriker**, a reliable and secure network infrastructure ensures smooth browsing, secure transactions, efficient vendor management, and a positive customer experience.

A network can be defined as:

- **Building Block of Online Commerce:** Provides the basic connectivity required for ApexStriker to operate as an online multi-vendor platform.
- **Technology to Integrate Business Processes:** Connects important processes such as product management, orders, payments, inventory, vendor management, and customer services.
- **Mediator for Digital Data Transmission:** Enables the exchange of product information, customer details, order information, and payment-related data between different users and the system.
- **Interaction Framework:** Facilitates communication and interaction between vendors, customers, administrators, and the e-commerce platform.
- **Secure and Scalable System:** Provides reliable access to the platform while helping protect sensitive customer, vendor, and transaction information.

World Wide Web (WWW)

The World Wide Web (WWW) is a system of interconnected web pages and resources accessed through the Internet. It allows users to access and interact with different types of content, including product information, images, reviews, and other multimedia content through a web browser.

In our project, **ApexStriker**, the WWW acts as the primary medium through which customers access the multi-vendor football accessories store. Customers can browse products from different vendors, search for football-related items, apply **product and brand filters**, view product details and customer reviews, add products to their cart, and place orders online.

The WWW also enables vendors to manage and offer their products through the platform, while administrators can manage users, vendors, products, orders, and reported vendors. It provides accessibility to the platform through the Internet and supports important e-commerce features such as **customer reviews, vendor reporting, secure authentication, eSewa and Cash on Delivery (COD) payments, and online order processing**.

Internet

The Internet is a worldwide network that connects billions of devices and enables the exchange of information and communication between users from different locations.

For our project, **ApexStriker**, the Internet acts as the backbone that connects customers, vendors, administrators, and the Django-based e-commerce platform. It supports:

- Secure login and signup for customers, vendors, and administrators.
- Product search, browsing, and filtering.
- Integration with Nepali payment methods such as eSewa and Cash on Delivery (COD).
- Updates related to product availability, inventory, orders, and payment status.
- Communication and data exchange between the customer, vendor, and administrator dashboards.
- Online vendor management, product management, customer reviews, and vendor reporting.

I-Way (Information Superhighway)

The Information Superhighway refers to the telecommunications infrastructure that provides rapid and reliable access to information. It acts as a digital highway that connects customers, businesses, vendors, and service providers, enabling smooth communication and online transactions. In our ApexStriker project, the I-Way enables users to browse football products, place orders, communicate with vendors, and make payments through the e-commerce platform.

Components of I-Way in our project:

1. **Consumer Access Equipment:**

   Customers, vendors, and administrators use smartphones, laptops, desktops, and tablets to access ApexStriker. These devices depend on hardware such as modems and routers and software such as operating systems and web browsers. For example,

a customer using Chrome on a smartphone can access the Django-based store, browse football accessories, add products to the cart, and complete checkout.

2. **Access Road or Media:**

   This is the communication infrastructure that transmits data between users and the server. In Nepal, this includes broadband internet, fiber-optic networks, mobile data services, and wireless networks. Customers can connect through fiber-optic internet, 4G/5G mobile data, or Wi-Fi. These access methods support product browsing, image loading, order processing, and online payment transactions.

3. **Global Information Distribution Networks:**

   These are communication infrastructures that connect networks across different regions and countries, providing reliable access to online services. They include undersea cables, satellite networks, data centers, and cloud hosting services. For ApexStriker, such infrastructure allows the platform to remain accessible to users from different locations and provides the foundation for future expansion of the multi-vendor e-commerce platform.

CHAPTER 4: PROCESS OF BUILDING WEBSITE

Process of Website Building

Our **Retech** is a C2C e-commerce website developed using the **Django framework** with an **SQLite database**. The process of building the website involves several structured steps to ensure that the platform is secure, user-friendly, and suitable for managing users, product listings, orders, payments, and other e-commerce activities.

Steps of the procedure of website building are as follows

1. **Create Django Project:** Initialize the project using django-admin startproject rt_project.
2. **App Creation:** Create a dedicated Django app named rt_app to handle models, forms, views, templates, and other application functionality.
3. **Define Models:** Create models for users, product listings, orders, payments, and other required entities. These models provide structured storage and management of the system's data.
4. **Design Forms:** Develop forms for user registration, login, product listing, product editing, and other required inputs**.**
5. **Develop Views:** Implement views for the homepage, product listing, product search and filtering, product details, direct purchasing, checkout, order management, user dashboard, and administrator dashboard.
6. **Templates & UI:** Develop responsive templates for login/signup, product listings, product details, user dashboards, checkout, and navigation using HTML, JavaScript, and Tailwind CSS to create a consistent and user-friendly interface.
7. **Product Listing & User Management:** Implement functionality that allows users to list their second-hand electronic products, provide product details and prices, manage their listings, and monitor their purchases. Administrators can monitor users, listings, orders, and other platform activities.
8. **Payment Integration:** Integrate supported payment methods such as eSewa and Cash on Delivery (COD) for direct product purchases.
9. **Testing on Local Server:** Run the project locally using python manage.py runserver and test features such as registration, login, product browsing and filtering, product listing, direct purchasing, order management, payments, and administrator monitoring.

CHAPTER 5: PAYMENT GATEWAY

Introduction

A payment gateway is a service that allows merchants to accept electronic payments from customers through their website. It acts as an intermediary between the e-commerce platform and the payment service, helping verify and process transactions. Payment gateways use secure communication and authentication mechanisms to protect transaction information and provide a convenient payment experience for online customers.

In our **ApexStriker**, we support **eSewa** and **Cash on Delivery (COD)** as payment methods. These options make the payment process convenient and suitable for customers in Nepal.

eSewa

eSewa is a widely used digital wallet and online payment service in Nepal. It provides a convenient platform for making online payments and other financial transactions. In our project, eSewa allows customers to pay for their football products electronically during checkout, making the purchasing process faster and more convenient.

Cash on Delivery (COD)

Cash on Delivery is a payment method where customers pay for their order when the product is delivered to them. In ApexStriker, COD provides an alternative for customers who prefer to pay in cash instead of making an online payment. This makes the platform more accessible to customers who may not use digital payment services.

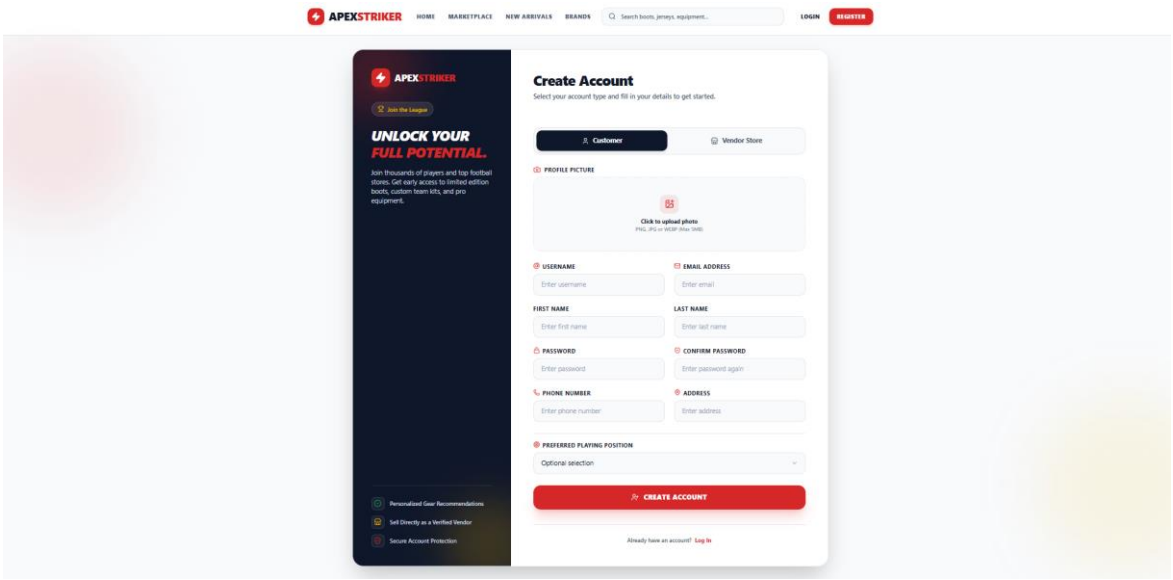

CHAPTER 6: HANDLING SECURITY ISSUE

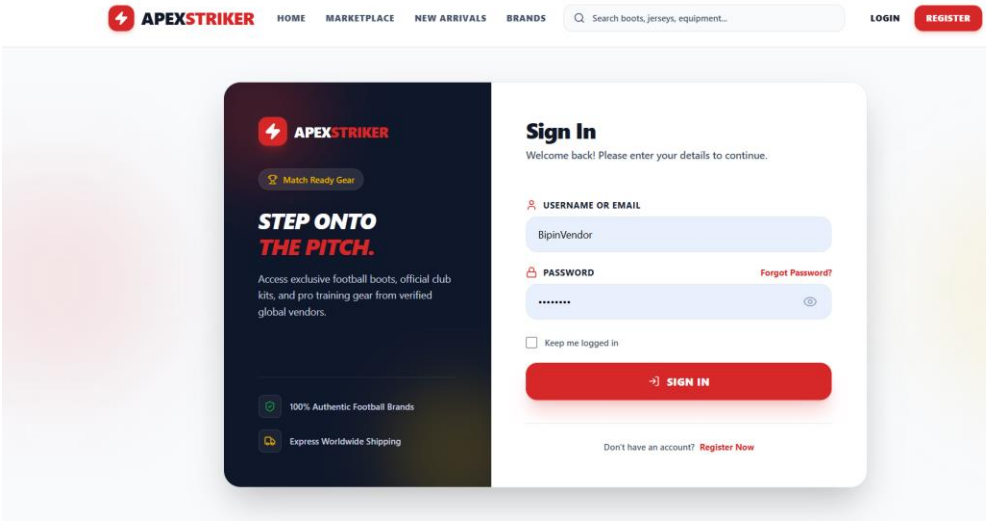

Handle Security Issue

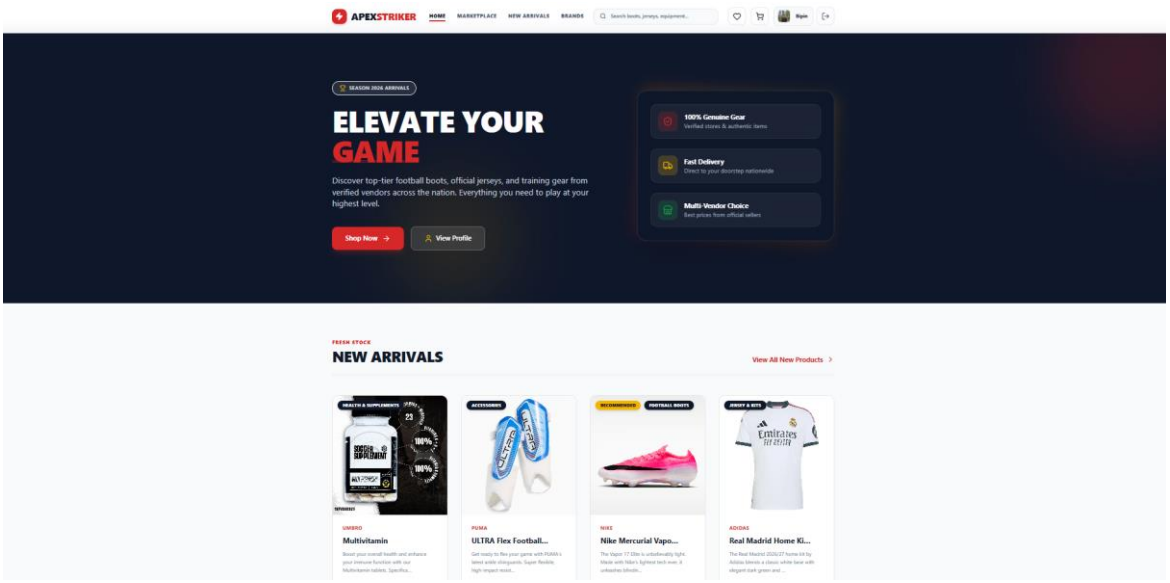

Security is one of the most important aspects of any e-commerce website. In our **ReTech**, multiple layers of security are implemented to protect both the admin panel and customer data.

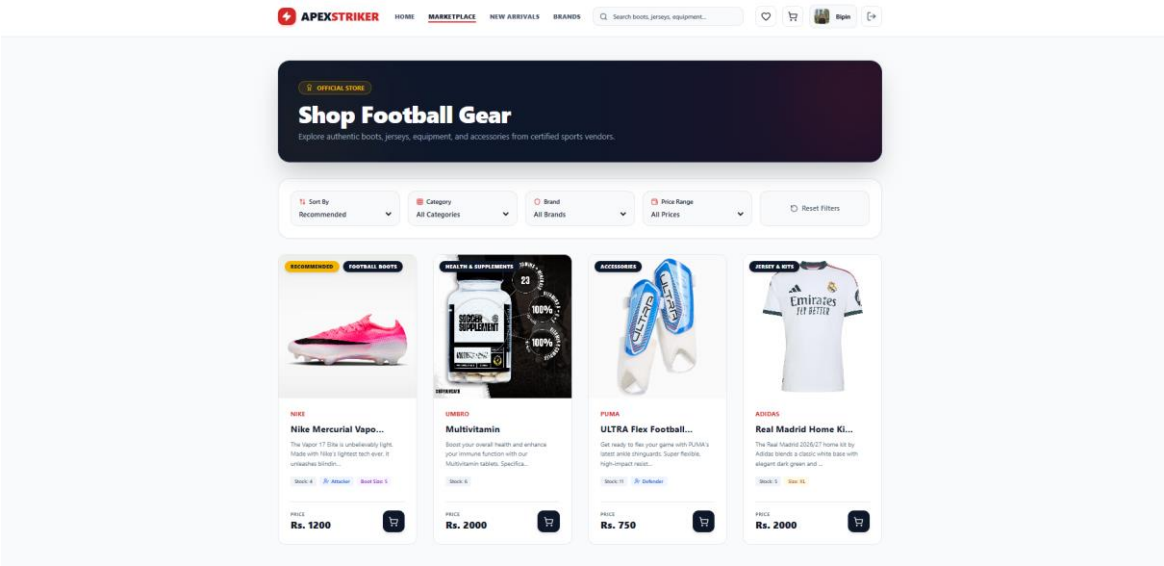

- **Authentication:** To access the admin panel, users must enter the correct username or email along with the password stored in the database. If the credentials do not match, access is denied. This prevents unauthorized users from entering the system.
- **Authorization:** Role-based access control ensures that only admins can manage products, orders, and reviews, while customers can only access their own dashboard. This separation of privileges reduces the risk of misuse.
- **Password Protection:** All passwords are stored in the database using hashing algorithms. This ensures that even if the database is compromised, raw passwords cannot be retrieved.
- **CSRF and Session Security:** Django's built-in CSRF tokens protect against cross-site request forgery attacks. Secure session handling ensures that user login sessions cannot be hijacked.

CHAPTER 8: CONCLUSION

Conclusion

In conclusion, developing an e-commerce website for **Retech** using the Django framework provides a flexible and reliable platform for creating a convenient C2C marketplace for second-hand electronics. Django's structured architecture and built-in security features allow the system to be developed according to the requirements of buyers, sellers, and administrators. The integration of an SQLite database supports efficient management of users, product listings, orders, payments, and other system data, while payment options such as **eSewa** and **Cash on Delivery (COD)** make the platform suitable for users in Nepal.

Throughout the development process, emphasis was placed on creating a simple and user-friendly experience, from browsing and filtering second-hand products to viewing product details and directly purchasing available products. Features such as secure login/signup, product listing, product management, direct purchasing, order management, and separate user and administrator functionalities improve the usability and management of the platform.

By utilizing Django, SQLite, Tailwind CSS, and modern web technologies, Retech provides a practical C2C e-commerce platform for buying and selling second-hand electronic products. The system allows users to list their used electronics and purchase products from other users, while administrators can monitor users, product listings, orders, and other platform activities. Ultimately, the project demonstrates how a simple and localized C2C e-commerce solution can provide an affordable and convenient marketplace for second-hand electronics in Nepal.
